

Detack Group partners with Cyber Node to enhance Industrial Cybersecurity in Western Australia

Perth, WA, Australia, March 2024 - Detack Group, a German cybersecurity company with over 20 years of experience in industrial cybersecurity, has announced a strategic partnership with Perth-based company **Cyber Node** to provide high-end services and develop cyber security solutions across Western Australia's key industrial sectors, including mining, energy and gas.

In 2024, Detack established Detack Pty Ltd in Australia, further solidifying its commitment to the Australian market. This new collaboration with Cyber Node marks a significant step in expanding its global footprint.

The integration of production and corporate networks through IT/OT convergence and the adoption of the Internet of Things (IoT) offers numerous advantages for industrial companies. These benefits include streamlined digital processes and enhanced collaboration across company ecosystems. However, this increased connectivity also heightens the risk of cyber threats. Through industrial cybersecurity, we provide comprehensive protection for systems and facilities.

"We aim to mitigate these risks through assessing and improving industrial cybersecurity, enabling comprehensive protection of systems and plants," said Matt Breuillac, Director of Cyber Node. With more than 15 years of experience managing risks in sensitive environments like nuclear and O&G, Matt emphasizes the importance of robust security frameworks. "By leveraging Detack's cutting-edge capabilities alongside our industrial and local expertise, we offer unparalleled protection for critical infrastructure."

Costin Enache, CEO at Detack Group, added, "Our goal is to empower organizations with the capabilities needed to gain full visibility and improve operational security, essential components in today's interconnected industrial environments."

This partnership will deliver tailored security services and solutions to address the evolving needs of WA's industrial landscape.
