

Detack Group joins forces with Brisbane-based Green Cyber Consulting to enhance cybersecurity solutions across Australia

Brisbane, Queensland, Australia – April 2024 – **Detack Group**, a German company with over 20 years of cybersecurity experience, has announced a strategic partnership with Queensland-based Green Cyber Consulting, strengthening Detack's capability in Australia, offering bespoke cybersecurity services and solutions with a local touch.

In 2024, Detack expanded its reach by setting up **Detack Pty Ltd**, reinforcing its commitment to the Australian market and its need for advanced cybersecurity measures.

Green Cyber Consulting is led by Adam Green, an industry veteran with more than 20 years of experience in cybersecurity and business transformation. Having held leadership positions with global tech giants including IBM, Verizon, Honeywell and NTT, Adam also serves as the National Ambassador for CI-ISAC Australia and the National Health Cyber Sharing Network, focused on collaborative intelligence sharing and collective defence. His insights into the Australian cybersecurity landscape, combined with Detack's expertise, creates a powerful team.

With clients in over 30 countries, Detack's patented Enterprise Password Analytics Solution (EPAS) will be a key part of this collaboration. "The Australian Signals Directorate 2023 and 2024 cyber threat reports indicate that the predominant cause of security incidents within the nations critical infrastructure, and Government sectors, was attributed to compromised credentials and accounts. Being able to close this security gap in a matter of days marks a paradigm shift in addressing this problem. We believe this partnership will greatly enhance cybersecurity resilience of our Australian clients", said **Costin Enache, CEO at Detack Group**.

Green Cyber Consulting and Detack aim to offer cutting-edge solutions that meet the unique challenges faced by Australian Government, critical infrastructure, healthcare providers and private enterprise alike.

Adam Green, Chief Information Security Officer of Green Cyber Consulting, commented, "Combining Detack's proven technology with our deep industry expertise enables us to deliver effective, fit-for-purpose cybersecurity solutions and consulting services to address a major flaw in our nation's cybersecurity defence strategy. By shining a spotlight on the gap between password compliance and effective security, this partnership will provide a mechanism to improve often weak password policies, allowing cyber professionals to redirect defensive efforts."

This collaboration will focus on developing comprehensive cybersecurity packages that go beyond policy and regulations and addresses the specific needs of State and Federal Government, and businesses.
